AI Project Auditor V2 — Audit Report

Executive Summary

Metric	Value
Project	smart-ai-auditor-demo
Audit date	2026-10-20 00:00:00
Audit source	Synthetic public example
Technology detected	Python
LLM provider	Not used
Checklist version	demo-checklist
Total checks	3
Applicable checks	2
Passed	1
Failed	1
Skipped / Not Applicable	1
Errors	
Audit duration	0.12 seconds

Checklist Coverage

Category	Pass	Fail	Skipped	Error	Total
AI/LLM			1		1
Dependencies		1			1
Security	1				1

Severity Summary

Severity	Count
Critical	
High	
Medium	
Low	1
Info	

Risk score: 1/100 (Minimal). Formula: min(100, Critical×25 + High×10 + Medium×4 + Low×1).

Technology Profile

Technology	Detected
Python	Yes

Technology	Detected
FastAPI	No
React	No
Docker	No
AI/ML	No
LLM	No
RAG	No

Scanners Used

Analysis mechanism	Runtime status
Synthetic public example; no repository was scanned.	Synthetic public example; no repository was scanned.

Audit Limitations

• This is a documentation asset, not a real audit.

Checklist Status

Check ID	Category	Status	Notes
DEP-003	Dependencies	FAIL	Synthetic demonstration finding.
SEC-004	Security	PASS	Synthetic demonstration check passed.
AI-002	AI/LLM	SKIPPED	Not applicable to the synthetic example.

Findings (1)

DEMO-DEP-001 — Unpinned Dependency (demonstration)

Field	Value
Check ID	DEP-003
Category / Severity	Dependencies / Low
Confidence / verification	High / Verified
File / line	requirements.txt:1
Evidence	example-library
Why it matters	This synthetic example shows how an unpinned dependency is reported.
Impact	Version drift can make builds less reproducible.
Recommendation	Pin a reviewed compatible version and refresh it through normal dependency maintenance.
AI remediation	Add a reviewed version constraint, test the update, and document the upgrade cadence.
Technology / detection	Python / Static
